HFO *Coolant* Maintenance Program

Coolant maintenance may be the single, most important, and yet most often neglected maintenance item for assuring continued top performance, accuracy, and longevity of your machine tool. Improperly maintained coolant will cause corrosion and rust, resulting in accelerated deterioration, and premature failure of your investment, as well as poorer tool life and cutting performance. Our extensive experience has prompted us to develop and offer a comprehensive Coolant Maintenance Program.

Here's what it takes:

- 1** Removal of waste coolant from the machine and coolant tank
- 2** Removal of chips and debris from machine and coolant tank
- 3** Flushing entire coolant system and machine work area
- 4** Filling the coolant tank with a fresh batch of coolant *
- 5** Enjoy a well maintained machine!

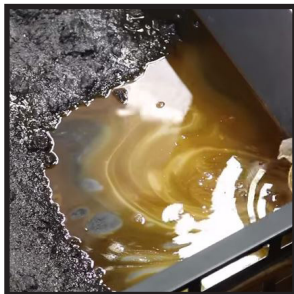

* Coolant not included in this Coolant Maintenance Program, and may be purchased separately through HFO-Anaheim.

Starting at
\$995.00
